

NEEDS ASSESSMENT

Understanding Your Control Systems

AE2S is experienced in providing instrumentation and controls systems services for municipal and industrial water, wastewater, and stormwater systems.

Our experienced staff of process and controls engineers coupled with our talented programmers and technicians understands the complexities of your total system. In fact, our control systems engineers are programmers. This understanding ensures the correct critical path is identified for a successfully integrated control system.

Do you know if your control system is providing optimal performance?

What steps do you need to take to make the most of your control system?

our clients to provide the controls system that best fits your needs.

One of the most effective planning tools you can utilize to optimize your controls system is a **Needs Assessment**. This service includes a full assessment of your existing control system, from inventory to staff-identified problems. AE2S then develops and delivers a comprehensive plan with an efficient path that meets the needs and demands of your facility for years to come.

Control Systems Group Manager:

Jason Sanden

Jason.Sanden@ae2s.com

As Easy as 1-2-3-4

- 1 AE2S control system experts perform onsite documentation of your control system (usually a 1-2 day process).
- 2 We meet with you and your staff to discuss system operations and challenges.
- 3 We compile information gathered from evaluation and staff discussions into an organized upgrade plan.
- 4 The upgrade options and estimated costs for short- and long-term control system planning are then presented.
